RAISING HEALTH STANDARDS

Dear Members,

I am pleased to present the annual edition of the Diplomatic Club Medical Directory as a service to the diplomatic corp.

The aim of the bulletin is to assist diplomats and their families and staff who often come to Israel without knowledge of Hebrew, and perhaps without foreign health insurance that would cover them adequately in the event of emergencies or health problem.

We are greatly indebted to the local doctors and medical centers that have agreed to be listed in the Diplomatic Club Medical Bulletin, and for their agreement to accept the international health insurance scheme outlined.

We also thank the Ministry of Health of Israel for appreciating the complex problem of health insurance for diplomatic staff, and for supporting the Medical Bulletin.

We too understand the difficulties of living in a foreign country and hope that this service will prove helpful to diplomatic staff and their families.

***Sincerely Yours
Julia Verdel
General Manager***

IMPORTANT NOTE

Any entry in the medical directory is a public information service only and is not intended to serve any other purpose.

Entry in the directory is voluntary and neutral and is not an advertisement or a recommendation over any similar facilities not entered.

Information in the directory will be updated and re-published once a year. While it is intended to be as accurate as possible, the publishers are not responsible for inevitable changes that occur with time.

The following list is work that took months ,represented the best of the finest in their fields physicians in Israel.

Part information received from Ma'ariv newspaper and translated and up-dated by The Diplomatic Club.

ONCOLOGY:

1. Professor Tali Sigal, Director of the Noiroaonkology Unit. Location: Hadasa Hospital, Jerusalem. Tel: 02-6777111
2. Professor Moshe Inbar, Director of the Oncology array, Medical Center, Tel-Aviv (Ichilov) and head of the Oncology Department at the Faculty of Medicine, Tel Aviv University. Tel: 03-6973407, 03-5444413

About the clinic

Wisefeeet is the foot and Wound Treatment Centre that makes use of advanced technologies to provide the best solutions for all pathological conditions of the feet: from aches & pains, structural deformities, nails & skin condition, chronic wounds, especially treatment aimed at saving limbs from amputation. And basically putting you back on your feet.

The first clinic was established in 1997 and since provided thousands of patients, world wide, with first class diagnosis and treatments.

Amongst the treatments provided:

- Medical Tourism
- Calluses, rough skin and nails
- Ingrown toenails
- Orthotics / Insoles
- Gait problems
- Fungal infections (mycosis)
- Walking/stress fractures
- Footwear
- Warts
- Sports medicine
- Consultation – second opinion
- Advanced technology treatment of chronic wounds
- Telemedicine

As medical Director of Wisefeeet he has established podiatry clinics to serve different populations in the middle east & London. He is the President & founder of Israeli Association of Podiatrists & chiropodists and serves as: Chief Podiatrist & Diabetic foot consultant to medical insurance healthcare, Podiatry consultant to the chief orthopedic Military officer, and served as Director of the foot & wound treatment centre at Bikur Holim Medical centre, member of the Medical Advisory board for BST Technology, Medical Advisor to Naot footwear industry.

The medical staff operates internationally from its Jerusalem, Tel-Aviv based clinics and follows-up the patient's care by Wisefeeet's unique, secured digital based computerized program, which was developed specifically for us. In this way the medical team may provide services regardless of the geographic location of the patient.

The multidisciplinary medical & therapeutic team is led by British trained & licensed Podiatrist:

**Daniel A. Weisz. BSc (Hons.)
Podiatric Medicine SRCh MChS**

After graduating in Podiatry from the University of Westminster, Daniel pursued a clinical career in Podiatry, biomechanics, Diabetic feet & advances wound treatment technologies.

Advanced Procedures In Gynecology

Dr. Shlomi Cohen-Eylon prides himself on his years of experience providing compassionate medical care for women whether its a routine check-up or a wide range of gynecological surgeries. He is the Senior Attending Physician at the department of Obstetrics & Gynecology at the Sheba Medical Center in Tel-Hashomer and also maintains a private practice at the HMC-Herzliya Medical Center in Herzliya Pituach. Dr. Cohen specializes in minimally invasive gynecological surgeries and is a member of the Israeli Board of Gynecological Endoscopy.

As a graduate of the Ben-Gurion Medical School in the Negev, and a board certified specialist in Obstetrics and Gynecology, Dr. Cohen went on to be a leading resident during his training at the Sheba Medical Center where he won the prestigious AAGL (American Association of Gynecological Laparoscopist) prize for his research in the preservation of ovaries in women with ovarian torsion.

During his last year of residency, Dr. Cohen was selected for a fellowship in Celrmont-Ferrand, France in one of the world leading centers for minimally invasive gynecological surgeries. During those two years, he won the AAGL prize twice more for his original research papers and was one of the first gynecologists in the world to practice robotic surgeries with the DaVinci robot.

After his fellowship, the doctor returned to the Sheba Medical Center in Israel and established a new service for tubal catheterization for infertile women using a method he developed. Dr. Cohen is a pioneer in the application of ESSURE micro inserts for the permanent prevention of pregnancies without using an operating room and leaving no scars. Adapting this technique, Dr. Cohen has

used these coils for assisting women with repetitive in vitro fertilization failures and tubal infertility to successfully conceive. This treatment is known throughout Israel and attracts patients from hospitals from around the country. Additionally, Dr. Cohen was recently invited to lecture about his recent discovery of the treatment of women with dysfunctional bleeding post Caesarean section at the ESGE (European Society of Gynecological Laparoscopists) in Paris.

Assisted by his fluency in English and French, Dr. Cohen has gained extensive experience in treating and operating on foreign citizens including diplomats from the USA, France and the Netherlands. His philosophy of uterus and ovary preservation in situations where historically women lost those organs has him considered as a leading gynecologist in Israel among his patients and colleagues. As a father of three, he's empathetic to patients trying to conceive.

Dr. Cohen's expertise has him consulting and operating on patients in HMC and Assuta, two leading private hospitals in Israel.

At his private clinic, Dr. Cohen routinely performs:

- Annual check-ups with ultrasound and pap smears
- Colposcopies for the detection of cervical dysplasia
- In-office hysteroscopies for the application of ESSURE micro inserts and the detection of mechanical Infertility problems
- Medical and Surgical Termination of pregnancies
- Hysteroscopies for the detection and treatment of irregular female bleeding, infertility treatment of uterine polyps and fibroids
- Laparoscopies for the treatment of ovarian cysts and uterine fibroids
- Caesarean section deliveries.

Scar post abdominal hysterectomy

Scar post laparoscopic hysterectomy

The advantages of Minimal Invasive Gynecological Surgeries according to Dr. Cohen's Philosophy

- Short hospital stay, most patients can go home same day few hours post operation or the next day at most
- Excellent cosmetic results: small incisions of 1cm at most will not alter the body shape
- Minimal trauma to your organs, less bleeding, Less complications and maximum anatomic preservation of your organs

It is Dr. Cohen's sincere intention to preserve the uterus and ovaries by all means whenever possible whether extracting ovarian cysts, uterine fibroids or uterine polyps and he is confident that his techniques and experience will assure a patient a safe operation with minimal trauma to their self- image and physique.

- Restorative and Prosthetic Dentistry
- Oral Medicine
- Interdisciplinary Treatments

Presentation & Overview

Located in Tel Aviv, the Bichacho Clinic is world-renowned state-of-the-art dental health clinic, fully digitalized, specializing in aesthetic dentistry, implant therapy, prosthetic/restorative dentistry, oral medicine, and collaborates with other specialists: Endodontists, Periodontists, Orthodontists etc.

An experienced and attentive staff of highly qualified dentists, hygienists and a professional support staff offer its patients a wide array of advanced dental treatments, utilizing cutting-edge materials, digital computerized systems and state-of-the-art treatment concepts.

The clinic cooperates on a daily basis with a gallery of the leading dentists and master technicians in Europe, USA and Brazil.

The Bichacho clinic has been at the forefront of excellent dental care for more than 25 years, serving its Israeli and international clientele with the ultimate standard of care, and is a founding member of The Leading Dental Centers of The World (www.leadingdentalcenters.com).

Leading Doctor

Nitzan Bichacho, D.M.D. is a recipient of numerous awards from some of the most prestigious dental societies and institutions in the world, for outstanding professional achievements and significant contributions to global esthetic and implant dentistry.

Prof. Bichacho is the head of the R. E. Goldstein Center for Aesthetic Dentistry at the Faculty of Dental Medicine of the Hebrew University and Hadassah in Jerusalem.

Prof. Bichacho is Past President and a Life Member of the prestigious European Academy of Esthetic Dentistry (www.eaed.org), serves at the scientific boards of leading international dental journals and consults to the managements of top international dental companies. He divides his professional time between treating patients at the Bichacho clinic and teaching and lecturing around the globe.

DENTAL IMPLANTS IN ONE DAY

All on 4-6 - An innovative method of dental implantation.

The All on 4-6 implants system was invented by Dr. Paulo Malo in the 80's. The system is based on fastening 4-6 implants in very specific locations to create a three dimensional trapezoid force that enables the attachment of bolted dentures or a bolted bridge containing 12 teeth. As a rule, this method is meant for jaws that are lacking all of the teeth, or when which all of the teeth must be extracted. Sometimes, if only one side of the jaw is missing teeth, this method can be used only on that side.

The Benefits of the "All on 4-6" Method:

- TEETH IN A DAY.
- Immediate loading of the implants – within a few hours, a previously toothless patient can chew.
- Suitable for very busy people or people suffering from dental anxiety.
- Minimization of surgical procedures and treatment time.
- Extraction, implantation, and returning to a functional mouth in just one day!
- Significantly less expensive than other permanent rehabilitation solutions.

The Disadvantages of the "All on 4-6" Method:

- Not appropriate for every patient – significant health issues can interfere with the treatment, and sufficient quantity and quality of initial bone is necessary.
- Cannot be performed by most dentists, since it requires very careful planning, especially high surgical capability, and extensive rehabilitative experience.
- Two dentists are needed because of the complexity of the procedure, who must work together at the same clinic.

ALL THAT YOU NEED UNDER ONE ROOF

No more running around between medical centers, clinics and specialists. Dr. Jerry Kohen's Dental Center is a multidisciplinary private clinic, with eighteen dentists and skilled specialists will provide fast, efficient treatment at one excellent clinic.

A personal approach

The right combination of professionalism and personal attention – personally tailored for you.

Professionalism

We make every effort so that you will have a healthy, stunning smile by using the best equipment, the finest materials, and innovation and openness to treat you in the best way possible.

Responsibility, knowledge and experience

Established in 1971, and due to the extensive knowledge and experience acquired since then, the clinic has become a national center for aesthetics and dental implants. By using the newest, most advanced methods, we provide quick and trustworthy solutions, from a missing tooth to an entire toothless mouth rehabilitated in one day! We assume 100% responsibility for all rehabilitations for a period of 8 years!

Green Dental Clinic

We use green construction, water recycling methods, electricity saving methods, full computerization, and a digital panoramic x-ray machine to help reduce the impact on our environment.

Availability

The clinic is open almost all day with a large number of dentists available to treat you, even in an emergency.

Aesthetics and Hygiene

We are careful to keep our clinic clean and aesthetic, from the waiting room to the treatment room and the dentist's sterilization – using disposable materials such as aprons, needles, trays, and syringes.

Private Clinic

Our clinic has operated for over 40 years, and we are personally responsible to our many patients, unlike anonymous corporate entities

A NATURAL LOOK

A natural look is the usual request from many of my patients. They are concerned because they have seen the results of “overdone” patients both from surgical procedures and non-invasive treatments as well. They are all familiar with stage and screen personalities that, in the younger ones, have wide exaggerated lips, overly enlarged cheek bones, and too high eyebrows (having a surprised look all the time) – the result of overdone injections - or in the older ones with mask-like, stiff, non-expressive faces – the result of too many or overdone surgeries.

What has happened in the past five years is a dramatic shift in the use of non-invasive techniques such as dermal fillers and Botox. In the U.S. alone there were 12 million of these performed last year. This has attracted many non-certified or inadequately trained practitioners into the market.

There is still a sizeable population where surgery is a viable option. In many cases a combination of approaches is ideal. The various practitioners involved in this are not all trained in surgery. So how does one decide what to do?

The first step is to seek out a board certified qualified plastic surgeon with experience in both approaches – surgical and non-invasive for a consultation.

Ask a lot of questions in order to understand the approaches recommended by the doctor. Don't rush into making a decision. Have realistic expectations. Understand the possible complications. Learn about the materials used by the doctor.

New technologies and a better understanding of the aging skin give us the tools to provide for our patients a “Natural Look”.

Dr. Lehavit Akerman
Nordau 50, Hertzliya
09-9582026, 054-7553605
lehavita@013.net
www.DrLehavit.co.il

At different stages of our lives, our skin, the largest organ, often must endure different challenges.

As a noted dermatologist, Dr. Lehavit Akerman has specialized in literally making her patients feel comfortable in their own skins. From one's infancy to old age, our skin can cause us physical discomfort or exhibit features we might find embarrassing. Yet, with state of the art technology, Dr. Akerman has treated thousands of patients successfully for a wide range of different skin ailments and cosmetic issues.

Dr. Akerman is an Israeli native who studied medicine at Tel Aviv University and has worked at local hospitals including the Beilinson and Hasharon Hospitals in Petah Tikva. Currently, she oversees the dermatology department of the Rothschild HMO Health Services in Petach-Tikva and is a senior physician for Maccabi Health Services. Although she keeps busy with a successful practice and oversight responsibilities, Dr. Akerman personally performs all treatments on her patients to ensure the best care results

in the patient being satisfied. With an emphasis on the use of the most modern techniques and equipment, Dr. Akerman keeps up to date with the latest therapeutic options by actively conducting research which also is a source for the many lectures she has been giving at medical conferences around the world.

One focus of Dr. Akerman's studies and a result in her practice has been the use of lasers which have been proven to be safe and effective for a wide range of skin ailments and issues. For example, in one's youth or even for adults, these lasers have been effective in removing scarring from acne, stretch marks, surgical scars, pigmentation abnormalities, wrinkles and more. . Often these treatments are completed within a month, although sometimes it might take longer- according to the problem and treatment that has been chosen . Additionally, as we age our skin often doesn't reflect how young we feel inside. Dr. Akerman has a wide range of treatments to bring a new shine to our face. Skin rejuvenation has proven another effective laser and radiofrequency treatment that is an alternative to more invasive surgical procedures. It's not only effective for lessening wrinkles and sun spots on one's face but also on one's hands and chest which also are exposed as to the ravages of the sun and have been an indicator of how gracefully our skin has aged. Lasers are also used to tighten saggy skin that has resulted in jowls under the chin or sagginess under the

eyes. Noticeable and dramatic results typically appear after only three to six sessions.

The effective use of lasers are not only limited to being used on hands and faces. Lasers have become a popular treatment for unsightly spider and varicose veins on legs whether they're superficial or deeper and regardless of their size. As well, lasers are used to treat patients suffering from psoriasis and vitiligo, stretch marks and hypopigmentation as well as for pain free hair removal so that there are few places on the body that lasers are not an effective, safe and expedient treatment alternative to often more painful, slower or more invasive surgical, or topical treatments. Lasers are also effective at changing an unwanted tattoo from a "permanent" youthful indiscretion into a faded memory.

That's not to say that Dr. Akerman's practice is limited to only the use of lasers rather that it's enhanced by their use. The doctor also uses the most advanced fillers in the market including Restylane products and Botox to improve different wrinkles, to reshape high cheek bones, lips etc' which help retain a younger look.. These treatments can be repeated every 6-12 months for those patients that are proven to be good candidates for treatment, and according to the treatment that had been chosen.

Rest assured what ever your skin related issue, Dr. Lehavit Akerman has her thumb on a safe and effective treatment for you.

www.drwinkler.co.il

Eyal Winkler M.D

Eyal Winkler M.D. is the Head of the department of Plastic Reconstructive and Aesthetic Surgery at Sheba Medical Center, Tel Hashomer, Israel.

Dr. Eyal Winkler is also the Medical Director of Class Clinic, the Cosmetic medical center at Sheba Medical Center, Tel Hashomer, Israel.

During 2005-2009, Eyal Winkler M.D. served as the President of the Israeli Society of Plastic & Aesthetic Surgery. Dr. Eyal Winkler is an Associate Professor at the Faculty of Medicine at Tel Aviv University.

The private practice of Dr. Eyal Winkler is situated in 17 Brazil street (floor 6), in Ramat-Aviv, Tel-Aviv. He receives patients for private consultations of surgical and non-surgical aesthetic treatments such as: facelift, botox injections and other filling injections (e.g. Restylane, Macrolane), forehead lift, eyelids, rhinoplasty (nose job), ear pinning, liposuction, abdominal tuck, breast (augmentation, reduction, a-symmetry, gynecosmetics), excisional biopsy.

Biography

Over the years Dr. Winkler has gained vast knowledge and experience in all kinds of cosmetic surgery, bringing to Israel unique and innovative surgery techniques in the fields of liposuction and breast reduction. These techniques are unique in that there are minimum scars that result in a natural look.

Recently Eyal Winkler M.D. published a book **“All the Truth in the Face”** (soon to be translated, currently available in Hebrew only).

The book gives a thorough insight into all surgical and non-surgical facial treatments, including many illustrative pictures of “before and after” for each procedure.

Dr. Eyal Winkler believes that the plastic surgeon should most importantly be humane and empathic to his patients’ needs: “the professional & reliable plastic surgeon strives to provide his patients the best treatment both professionally and personally”.

Dr. Winkler constantly updates his professional skills and knowledge, learning new techniques, and performs operations only in fields of his expertise. He is very well known and connected in the international community.

“The professional & reliable plastic surgeon strives to provide his patients the best treatment both professionally and personally”.

Another aspect of Dr. Eyal Winkler’s international activity is chairing the bi-annual World Congress on Controversies in Plastic Surgery, Dermatology & Anti Aging Medicine (CoPAASDy), held in Barcelona, Spain in 2011 and the upcoming congress to be held in Berlin, Germany in 2013.

Eyal Winkler M.D. was the head and leader of more than 15 humanitarian delegations in the past 20 years, among which he had treated voluntarily burn victims in Lima, Peru and Uvira, Congo. The delegation run by Eyal Winkler M.D. has also operated children suffering from cleft lip palate in Nepal, Vietnam and at the Peruvian jungles, as well as the Andes.

Dr Winkler, a father of 3, lives in Tel Aviv. He is a keen athlete: he swims, practices yoga and long distance runs.

Amos Leviav MD

Plastic Surgeon

The Israel Society
of Plastic & Aesthetic Surgery

Let's face it. Many of us look into the mirror and we don't always like who we see looking back.

We can make minor changes by visiting a hair stylist, updating our wardrobe or even whitening our teeth. For many of us that's just not enough to let us walk out our door in the morning with the confidence to be the best version of who we can be. Sometimes to correct what we perceive to be congenital imperfections, to battle the ravages of time or even to heal the emotional and physical scars that disfiguring diseases or injuries can cause, we feel the need to make a more substantial change to how the world sees us.

There would seem to be few if any physicians in Israel more qualified to help a patient make those kind of changes than Dr. Amos Leviav, a world renown reconstructive & aesthetic surgeon, who has been honing his craft for over 30 years. Reconstructive surgery refers to surgery associated with helping rebuild one's appearance and even function after a major injury or disfiguring trauma or illness. Aesthetic surgery is often also referred to as "cosmetic surgery" or "plastic surgery" and has been recently popularized in TV in dramas like "Nip & Tuck". But for Dr. Leviav, people who come to him have real problems that he has spent a lifetime seeking, perfecting and implementing their real solutions. He presides over the Society of Plastic and Aesthetic Surgery in Israel, heads the teaching department at a local medical school and has served in notable fellowships as a peer with some of the most reputable reconstructive & aesthetic surgeons in the United States and Europe.

Working over thirty years at local hospitals has allowed Dr. Leviav to treat generations of patients as they recover from major and minor burns, reconstruct their figure after radical mastectomies or even lumpectomies and to help patients not only survive car crashes but to go on and thrive after sustaining major injuries. There's seemingly a countless amount of challenges a surgeon must overcome over thirty five years and that experience is priceless when it comes to helping someone look their best.

Even though his private practice in Tel Aviv typically deals with less dramatic procedures than he would often perform at a hospital, the experience and expertise he's acquired is relatable and for decades he has provided aesthetic remedies for outpatients. Dr. Leviav's range of outpatient services include face, brow and eye lifts, breast augmentation, liposuction, rhinoplasty ("nose jobs") and chin implants. He affirms, "I perform almost every aesthetic procedure except for hair transplants."

For over thirty years he has also demonstrated in significant ways how much he cares about the needs of his patients. Recently, he spearheaded an effort to get Israel's insurance companies to cover the expense of replacing silicone breast implants when it was discovered a French supplier wasn't using medical grade silicone in their implants. This saved thousands of sheckels for each patient and provided for those who wouldn't be able to afford to do it on their own.

DA VINCI SURGICAL SYSTEM: A New Age for Minimally Invasive Surgery

Robotically-assisted surgery with the da Vinci Surgical System is changing the surgical world in much the same way as laparoscopy did twenty years ago. Nowadays, many procedures such as appendectomy, hernia repair, cholecystectomy and some lung surgeries are performed with this minimally invasive technology. The system enables surgeons to experience the advantages of open surgery – 3-dimensional views of organs with those of laparoscopic surgery - smaller surgical incisions, less blood loss, less trauma and faster recovery periods.

In the operating room, the surgeon sits at the console away from the patient viewing a highly magnified 3-dimensional image of the body's interior. To operate, the surgeon uses master controls with his hands and feet to manipulate four interactive robotic arms, one of which holds a camera.

According to Prof. Jack Baniel, Prof. Jacob Ramon, Dr. Andrey Nado, Dr. Evgeny Solomonov and Dr. Jacob Korach – five leading surgeons at Assuta who recently started using this innovative system – after using robotically-assisted surgery, it would be very difficult to go back to previous surgical methods.

Dr. Andrei Nado, head of Urological Oncology at Rabin Medical Center and one of the most experienced renal laparoscopy surgeons in Israel said that the tissue and organ viewing capabilities of robotic surgery are extremely better than those of laparoscopic surgery. Moreover, the instruments are very thin and precise enabling the surgeon to approach regions in the body's interior that previously were difficult to reach.

Prof. Jacob Ramon, director of the Division of Urosurgery at Sheba Medical Center, explained that the four interactive robotic arms allow the surgeon a greater range of movement. In addition, the robotic arm holding the camera is much more stable than that of the assistant surgeon who usually holds the camera during laparoscopy. The robot also has better technological solutions for stopping bleeding during and after prostate surgeries.

Prof. Jack Baniel, professor of Urology and Chief of Urology Section at Rabin Medical Center agrees that this is the modality of the future. From a medical point of view, robotically-assisted surgery implies less blood loss, faster recovery, easier movement and less pain for the patient. The duration of the procedures is shorter compared to open surgery or laparoscopy.

According to Dr. Evgeny Solomonov, director of the Hepato-Pancreato-Biliary Surgery Unit at Rabin Medical Center, robotically-assisted surgery is very intuitive. The robot has great advantage in every parameter over regular surgery. The robotic arms enable surgical instrument movement of 360 degrees inside the body. He explained that robotically-assisted liver surgery decrease the rate of infections, the patient does not have to receive large quantities of liquids and there is reduced risk of edema and blood loss.

Jacob Korach, deputy director of the Gynecologic Oncology Department at Sheba Medical Center, added that the clear advantages of the robotic technique are less blood loss, fast functional recovery and earlier release of the patient. He explained that before implementation of this this technology, most complex surgeries such as radical hysterectomy entailed a large abdominal incision and long recovery; today 80% of hysterectomies can be performed using robotically-assisted surgery. He adds that he would perform almost all surgeries with this technique if the system were available to him on a daily basis.

Indeed, its high cost currently stands in the way of turning robotically-assisted surgery into a widely-available procedure. In the USA and in Italy, most prostate surgeries are performed using this technology. In Israel, however, robotic prostate surgery is currently only funded by Maccabi's supplementary healthcare services as well as by some of the private health insurance companies.

THE TIVONI CLINIC

Izhak Tivoni opened his practice over two decades ago and began to treat his patients using a unique method for diagnosis and treatment through the ear canal, a method he continues to develop to this day.

Functional medicine is based on the knowledge that the body is one complete system, in which all elements are in cooperation and mutual dependence. You can look at the body as a hologram, where any system or organ can reflect another and indicate the other system's condition. The method is based on the fact that the ear canal is the most reliable source of information about the body's systems. According to the information received, it is possible to determine the optimal way to treat the body, and restore its balance.

The Tivoni Company also operates a therapy clinic, where you can get treatment and diagnosis using the Tivoni method, which includes functional medicine, oligotherapy, and a unique method, developed by Izhak Tivoni, based on the diagnosis and treatment through the ear canal.

The key to overcoming disease and, preventing it in the first place – is consistency and persistence in maintaining the balance of control systems and intercellular communication in the body. This balance is what creates healing, and prevents the development of new diseases. Restoring the body's balance is the goal and job of the therapist who uses the Tivoni method. The clinic provides the patients with a tool – special nutritional supplements, which help to restore the body's

systems and their balance, thus healing the illness and preventing a new outbreak.

Tens of thousands of patients in Israel and abroad received the dedicated and skilled care that proved to be successful in diagnosis and treatment of a wide variety of physical problems (from joint pain to cancer), psychological issues (stress, depression, anxiety, etc.) and mental disorders (memory problems, ADHD, behavior problems, difficulty absorbing material and others).

The Tivoni method allows balancing and significant slowing down of cellular damage associated with aging. The results are evident in all emotional, mental and physical bodily functions, as well as on the skin, which is being smoothed from within.

If you wish to improve your health, treat a specific problem or receive general guidance about balance and prevention of illness, directly from Izhak Tivoni, here are several ways to set an appointment at the clinic.

Izhak Tivoni B.Sc.Te, the developer of the Tivoni method and the founder of the Tivoni Company, is a naturopath, an expert in functional medicine, oligotherapy and diagnosis and treatment through the ear canal.

Izhak is an engineer that specializes in technological developments in the field of natural medicine, and he possesses extensive training in various fields of alternative medicine and other related subjects such as acupuncture, herbal medicine, homeopathy, electronic engineering, computers, psychology and education.

Izhak Tivoni made a breakthrough in the field of natural medicine. By 1986, he developed a method based on a unique combination of diagnosis and treatment through the ear canal, oligotherapy and functional medicine.

In 1993 he cooperated with the Israeli army and treated Antoine Lahad (a Lebanese general and leader of the South Lebanon Army). In 1996 the Tivoni Company began selling its products worldwide and today, these products are available in other countries.

Izhak proposes to treat the person, not the disease; the root of the problem and not what is just seen on the surface. Tivoni's work is driven by the sense of mission to provide better and more comprehensive solution than the medicine of today can provide.

When his business was first started, he coined the following phrase: "Where available conventional and alternative medicines fail to the test, there is a place for research and development of innovative approaches". In fact, his method took alternative medicine one step further and created a combination that not only allows for natural external assistance, such as dietary supplements, but also creates the change from within.

Izhak does not forget to contribute back to the community from which he grew, his personal and social contribution runs through his company. In addition to various environment friendly initiatives, the Tivoni Company regularly contributes money, food and its products to the needy. Izhak Tivoni is one of the leading figures in the world of natural medicine and many of practitioners in that field come to him for counseling and guidance.
